PROFESSIONAL SUMMARY

Software Engineering undergraduate at Universiti Malaysia Pahang Al-Sultan Abdullah (UMPSA) with hands-on experience across full-stack web development, legacy system modernization, and production debugging. Delivered a 40% page-load improvement migrating a live system to modern stack during an internship, and independently ships and maintains freelance web projects end-to-end. with a growing focus on algorithmic problem-solving. Seeking a freelance or part-time Software Engineer or Full-Stack Developer role to keep building on real production work.

WORK EXPERIENCE

Bluevy Cloud Sdn. Bhd. , Kuala Lumpur **Aug 2025 –Feb 2026**
Internship Software Developer

- Migrated legacy system to a modern Nuxt.js stack, improving page load performance by 40% and enhancing long term maintainability.
- Developed and maintained frontend features using Vue.js/Nuxt.js translating design requirements into responsive, production ready UI components.
- Supported plugin testing and debugging activities, identifying system issues and assisting developers in resolving minor bugs.
- Built and maintained backend functionality in Laravel, including debugging and fixing urgent production issues to minimize downtime and client-reported errors.
- Participated in system and usability testing to ensure website functionality, responsiveness, and user experience standards were met.
- Developed new features end-to-end across frontend and backend, and tested them to catch regressions before deployment, improving release stability..
- A Collaborated with the development team using Git for version control — managing branches, resolving merge conflicts, and coordinating feature releases as part of the team workflow.
- Participated in code reviews and iterative debugging cycles, strengthening both code quality and delivery speed across the internship.

Aloft by Marriott, KL Sentral **July 2024 – Feb 2024**
Food and Beverage Service Crew (Part-Time)

- Oversaw buffet operations during peak hours, ensuring consistent food replenishment for an average of 200+ daily guests.
- Engaged guests in friendly, genuine conversation about their meals and day, creating a warmer atmosphere and building rapport that enhanced overall guest satisfaction.
- Read guest cues and adapted communication style on the fly more attentive and detail oriented with business travelers, more relaxed and conversational with families and groups.
- Acted as a point of contact for guest concerns during service, listening actively and resolving issues on the spot rather than escalating, which kept minor complaints from affecting the broader dining experience.
- Resolved guest requests and dietary needs directly, contributing to consistently high satisfaction scores.
- Trained new part-time staff on service procedures and guest interaction, coaching them on how to approach and read different types of guests during high-volume periods.

Degree in Software Engineering **2026 - Present**
Universiti Malaysia Pahang Al-Sultan Abdullah (UMPSA)
CGPA: 3.59

Diploma in Computer Science **2023 - 2026**
Universiti Malaysia Pahang Al-Sultan Abdullah (UMPSA)
CGPA: 3.59

Sijil Pelajaran Malaysia (SPM) **2020 - 2023**
SMK Gombak Setia
Result: 1A, 4A-, 1B+, 1B, 1C+, 1E

SKILLS & COMPETENCIES

Extra-Curricular Activities

- 2026 – Participant in International Hackathon Build Week Hackathon V2
- 2026 – Top 10 Finalist, Hackathon X: Fintech AI, UMPSA
- 2025 – Treasurer, Majlis Tertinggi Kelab MMA (Mixed Martial Arts Club), UMPSA
- 2025 – Committee Member (AJK Protocol), Hackathon X: Smart City
- 2024 – Participant, Hackathon X: Mission SDG – Code for Change, UMPSA
- 2024 – Crash Course: Power BI for Future Engineer, UMPSA
- 2024 – Color Run Participant, by RP5
- 2023 – Pekan Bridge Run, by RP5

Technical Skills

- Languages: PHP, TypeScript, Python, SQL, Java, Javascript
- Frameworks & Libraries: Laravel, NestJS, FastAPI, Nuxt.js, Vue.js, React, NextJS, Tailwind CSS
- Front-End Development: HTML, CSS, JavaScript, responsive UI design
- Back-End Development: REST API design, database driven application logic
- Version Control & Collaboration: Git, GitHub, GitLab
- Tools: Power BI, Microsoft Excel, Adobe (Photoshop, Illustrator)
- Practices: Debugging & production issue resolution, feature testing, Agile/team-based development workflow

Soft Skills

- Problem Solving & Analytical Thinking
- Attention to Detail
- Communication & Client Handling
- Team Collaboration
- Time Management
- Adaptability & Fast Learning

Languages

- **Bahasa Malaysia**: Excellent (Spoken & Written)
- **English**: Professional Proficiency (Spoken & Written)
- **Spanish**: Basic (Spoken & Written)

PROJECT

Final Year Project: Trackback Web-Based System

- Developed a web-based platform allowing users to report lost or found items and browse existing reports.
- Built core features including item reporting, location-based matching, and report browsing/search.
- Implemented an interactive map system using the OpenStreetMap API for location tracking of reported items.
- Integrated PHPMailer to automatically notify users by email on report submission and potential item matches.
- Developed back-end logic using PHP and MySQL for data handling, matching logic, and system functionality.
- Structured system workflow around PHP, MySQL, and XAMPP to support efficient data organization and reliable local development/testing.

Personal Project: Wedding Management System

- Developed a web-based platform allowing couples to manage their wedding digitally and guests to RSVP online.
- Built a digital invitation system, generating shareable links for guests to confirm or decline attendance.
- Implemented a real-time RSVP system to track and confirm guest attendance as responses came in.
- Built a couple dashboard to give couples a live view of confirmed and pending guests at a glance.
- Developed a tentative/schedule feature allowing couples to broadcast the event program flow to guests.
- Implemented a centralized photo-dump feature, letting both couple and guests upload and share photos in one place.
- Added a Bank QR feature, letting couples upload their bank QR code for guests who wished to send a digital gift.
- Developed back-end logic using Laravel for data handling, RSVP tracking, and system functionality.
- Designed front-end for a responsive, user-friendly experience across the invitation, RSVP, and dashboard flows.

Hackathon X: Fintech AI (Top 10 Finalist) (UMPSA): Jimat2Go – AI Impulse Spending Coach

- Developed an AI-powered app platform to help users curb impulse spending through scan-first purchase coaching.
- Built a scan feature using Gemini vision AI to identify products and pull relevant details from a photo.
- Integrated SerpAPI to compare prices across sources in real time before a purchase decision was made.
- Implemented investment-growth projections, modeling what a purchase amount could grow to if placed in common Malaysian instruments (ASB, Tabung Haji, Fixed Deposit) instead.
- Developed back-end logic using FastAPI to handle scanning, price comparison, and projection calculations.
- Led backend development solo while collaborating with teammates on front-end and pitch delivery.
- Prepared the technical pitch, Q&A documentation, and slide structure for the hackathon finals, helping the project place as a Top 10 Finalist

Freelance Project: Cynosure.Dev

- Led front-end development using Nuxt.js, building a responsive, production-ready site from design through deployment.
- Met directly with the client to gather requirements and translate their vision into a concrete design and feature scope.
- Designed the site's layout and UI, translating client requirements into a clean, usable interface.
- Managed version control with Git throughout development, structuring commits and branches for a clean development history.
- Deployed the finished site, handling the full build-to-live pipeline independently.
- Owned the project end-to-end as a freelance engagement from client consultation to final deployment.

Build Week Hackathon V2 By Girl Meets Tech (International) : TugasOS – AI Study Platform

- Built an AI study platform where students show verifiable evidence of their work: drafts are hashed and timestamped on BOT Chain through a Solidity smart contract, signed from the student's own wallet.
- Developed an AI tutor that answers only from the student's uploaded notes, with server-side validation that strips any citation not issued from the source material.
- Built a full-stack app with a React + Vite frontend, FastAPI backend and Postgres, deployed on Vercel and Supabase, with wallet-signature (EIP-191) login and no passwords.
- Implemented assignment milestones with rubric checking, and an exam module that turns past-year papers into a study plan and reworded quizzes with server-side marking.
- Deployed the smart contract to BOT Chain Testnet and verified on-chain commits end to end.
- Delivered a working demo within the hackathon week, collaborating with a teammate.
